

Reflection Report

Seminar Title: "Kickstart Angular: A Beginner's Workshop on Building Dynamic Web Applications"

I. Details of the Event/Activity

On May 21, 2025, we conducted our second seminar titled "Kickstart Angular: A Beginner's Workshop on Building Dynamic Web Applications." The seminar was facilitated by Mr. John Laurenze Leguidleguid and held at Gordon College, Fifth Floor, Room 509. The primary purpose of this seminar was to introduce the core concepts of Angular, a popular web development framework. The speaker provided a comprehensive overview of how Angular works and demonstrated how it can be used in building responsive and interactive websites or systems.

II. Reflections on the Seminar/Activity (Learnings)

Through this seminar, we learned that Angular is a powerful and modern tool used to create dynamic websites. It utilizes TypeScript and enables developers to build single-page applications that are fast, efficient, and user-friendly. We gained an understanding of how Angular applications are structured using components and modules, and how data flows within a project. The speaker also discussed important topics such as routing and data binding, which are essential for creating interactive web pages. Even though Angular can be considered more advanced than other frameworks, the session helped us grasp the basic concepts in a clear and simplified manner.

III. Reflections on Practical Applications of Learnings

The knowledge we acquired from the seminar can be applied in various real-world scenarios. We can now consider using Angular to develop school projects, build personal or portfolio websites, and even begin freelancing in web development. This skill is especially valuable for those planning to pursue careers in the field of information technology or software development. Furthermore, understanding Angular gives us insight into how professional and large-scale web applications are developed, making it a practical and marketable skill.

IV. Suggestions for Improvement for Future Activities

Incorporating real-world project examples or case studies could also make the session more engaging and relatable. Additionally, inviting guest speakers who work in the tech industry could provide different perspectives and inspire students. Finally, setting up an online group or forum for participants would encourage collaboration and continuous learning even after the seminar ends.
