

Reflection Report

Industry Visit at Wistron InfoComm (Philippines) Corporation

I. Details of the Event/Activity

We attended an industry visit at Wistron InfoComm (Philippines) Corporation on May 5, 2025, held at their facility located within the Subic Bay Freeport Zone. Wistron is a globally recognized leader in electronics manufacturing and operates as an Original Design Manufacturer (ODM), serving some of the world's leading technology companies.

The purpose of this visit was to expose us to real-world industrial practices and provide a deeper understanding of large-scale electronics manufacturing operations. During the tour, we were guided through various departments, including production, quality control, logistics, and others. In addition, company representatives gave a brief orientation, offering insights into Wistron's global role, core services, and organizational values.

II. Reflections on the Visit (Learnings)

This industry visit provided valuable insight into how the theoretical knowledge we gain in the classroom is applied in actual industrial settings. Observing the step-by-step manufacturing process helped reinforce my understanding of production workflows, quality assurance systems, and supply chain coordination.

One of the most impactful lessons was learning about Wistron's commitment to high-quality standards through methods such as lean manufacturing and the Kaizen principle. These approaches emphasize continuous improvement, efficiency, and precision critical factors in an industry where even minor errors can affect product integrity.

I also gained a broader perspective on the importance of environmental responsibility in electronics manufacturing. The company demonstrated how they manage electronic waste and implement sustainable practices within their operations. This experience highlighted that technological advancement and environmental protection can coexist effectively.

III. Reflections on Practical Applications of Learnings

The insights gained from this visit will be valuable as I prepare for a future career in the tech or manufacturing industry. It gave me a clearer picture of industry expectations in terms of skills, professionalism, and workplace discipline. Key concepts like workflow optimization, automation, and efficiency are now more than abstract ideas they are real practices that drive business success.

While my personal interests lie more in software development, the visit encouraged me to develop a stronger appreciation for the hardware and business side of the tech industry. It has enhanced my ability to understand and troubleshoot technical issues from a broader perspective. I also realized the importance of interdisciplinary collaboration, as each role within a company plays a vital part in achieving overall success. This experience helped me see beyond programming and appreciate the complete ecosystem within a technology-driven organization.

IV. Positive Feedback on the Event Organization

The industry visit was well-organized and highly informative. The Wistron staff were professional, accommodating, and made sure that we felt welcomed throughout the activity. Facilitators explained technical concepts clearly and were approachable when we had questions. We were provided with safety gear to ensure the protection of both equipment and visitors, reflecting their commitment to operational excellence and safety. Furthermore, the company generously gave us a commemorative company mug as a token of appreciation, which added a thoughtful touch to the experience.

V. Suggestions for Future Improvements

For future industry visits, it would be helpful to provide printed handouts or brochures that summarize key areas of the facility and the processes being explained. This would allow participants to follow along more effectively, especially when dealing with complex topics. Additionally, due to the large number of attendees, it was sometimes difficult to hear the speakers clearly. Using portable microphones or headsets could enhance audibility during the tour and ensure everyone can benefit from the information being shared.
